Edit your company settings

Company Settings holds the account-level facts about your business: who you are, what currency you work in, and when your financial year starts. Getting these right early matters because two of them quietly change how Insightly behaves later.

— WHAT YOU'LL BE ABLE TO DO

- ✓ Edit your organization's details
- ✓ Set your locale and primary currency
- ✓ Set your fiscal year start month

BEFORE YOU START

- You need administrator permissions to open System Settings.

- Have your fiscal year start month confirmed by whoever owns your financial reporting. Changing it later shifts how existing filters and dashboards group data.

EDIT YOUR COMPANY SETTINGS

- 01 Go to **System Settings > Product Settings > Company Settings**.
- 02 In **Organization Details**, enter your organization's name and address.
- 03 In **Locale Settings**, set your primary currency.
- 04 In **Fiscal Year**, choose the month your financial year begins.
- 05 Select **Save Details**.

IMPORTANT:

Your fiscal year start month affects relative date filters involving quarters — including list view filters and dashboard filters. If it's wrong, a filter for "this quarter" returns the wrong records, and nothing on screen tells you why.

REVIEW YOUR LICENSES

The same page shows what your subscription covers.

- 01 On the Company Settings page, find **Site Licenses**, **User Licenses** and **Add-Ons**.
- 02 Check your user license count against the number of people you plan to add in this phase.

If you're short, raise it with your Onboarding Specialist before you start adding users rather than after.

WHAT GOOD LOOKS LIKE

Your organization's name and address are saved, your primary currency appears on new records with a value, and your fiscal year starts in the right month. Your user license count covers the team you're about to add.

— CHECK YOUR UNDERSTANDING

Select an answer to see why it works — or why it doesn't. Every option explains itself.

QUESTION 1

Your financial year runs April to March, but Company Settings still shows January. A colleague builds a dashboard filtered to "this quarter." What happens?

- A The dashboard returns records from the wrong three-month window
- B The dashboard returns no records until the fiscal year is corrected
- C The dashboard is unaffected, because quarters are calendar-based
- D Insightly warns the user that the fiscal year is unset
